A-3	Barley	Malda ...	27,500	24,000	...	3,500	For want of sufficient rainfall in November and December last when the lands are prepared for sowing the seeds of *rabi* crops, there has been decrease in area under barley, gram, and tobacco. Instead of *bajra*, other vegetable crops were sown on the lands selected for this crop: hence the decrease in the area sown with *bajra* and increase in the area under miscellaneous food-crops. The estimates of area under rape and mustard and other oilseeds have been revised. Unfavourable weather at the time of cultivation is also the cause of decrease in the areas under other oil-seed crops. The soil of this district is not favourable for the growth of sugarcane; this and the want of rainfall at the planting season are the causes of decrease in the cultivation of this crop. The cultivation of jute is gradually increasing on account of its high price. On account of low price of indigo its cultivation is being abandoned. The estimate of the area under miscellaneous non-food-crops has been revised.
